Day #5

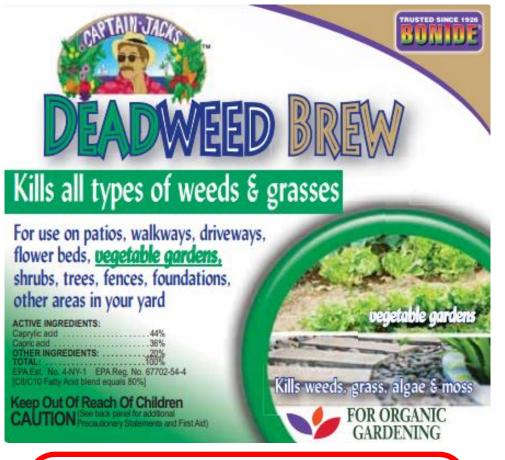

# Grass & Weeds

#### **Application Directions**

Shake well before using. Dilute with water using the chart below as a guide. Use the 3% solution for small, easy-to-kill weeds, less than 5 inches tall, and for moss and algae. Use the 6% solution for larger perennial weeds and grasses. Use the 9% solution for tough to kill weeds, vines, brush and sucker control. Apply the mixed solution at 2.5 – 7.5 gallons/1,000 ft<sup>2</sup> (3 – 9 fl. oz/yard<sup>2</sup>). Any standard hand-held or backpack sprayer can be used. Spray weed thoroughly, using a coarse nozzle setting to

reduce drift. Thorough coverage is extremely important. For spot treatment of individual weeds, apply the mixed solution to the center of plant to the point of runoff. Plant damage will be visible from a few hours to 2 days after spraying. Repeat treatment every 2 to 3 weeks to control new weeds growing from seed and re-growth from biennial and perennial weeds. Avoid spraying desirable plants. Thoroughly wash equipment after use.

	9% Solution
0.0	0.0
2 fl. oz.	3 fl. oz
8 fl. oz.	12 fl. oz.
8	fl. oz.

The weeds treated with DeadWeed Brew in these pictures were treated using the 9% solution due to the size of the weeds and grasses.

#### USE SITES

Use on visible weeds within vegetable and flower gardens, landscaped areas, and lawns and weeds in the vicinity of small fruits, vines and fruit trees.

Use on visible weeds around and on buildings, sidewalks, fences, bark mulch, driveways, patios and gravel.

### PRODUCT INFORMATION \*

This product is a fast-acting, non-selective broadleaf weed, grass, algae and moss killer. This product is not translocated. It will burn only those plant parts that are coated with spray solution. This product can be used any time during the year and works best during warm and dry conditions. Application during cold weather may delay appearance of plant damage. If rain falls within 3 hours of treatment, an additional spray may be required. This product controls many common annual weeds and suppresses the growth of some biennial and perennial weeds. It can be used in cultivated areas prior to planting grass, flowers and vegetables. Areas can be re-planted as soon as desirable level of weed control is obtained.
