

Use dormant sprays now to get ready for spring!

TRUSTED SINCE 1926
BONIDE[®]

Don't wait until spring to spray for pests and diseases. If you treat in the cool, dormant months before the pests and diseases attack, you can expect healthier plants in the spring. Control eggs and overwintering diseases with All Seasons and Liquid Copper.

Apply three times:
At time of dormancy (Thanksgiving)
Winter (Christmas)
Early Spring before new growth (Presidents Day)

Mix Bonide All Seasons and Liquid Copper together, or use separately, to control insects, insect eggs, and fungal diseases
